Open to remote opportunities

SUMMARY

AI & Data Science Engineering student with hands-on experience building machine learning, computer vision, and data-driven projects. Familiar with Python, Machine Learning, Deep Learning, SQL, and AI application development, with a strong interest in developing scalable solutions and continuously expanding technical expertise to solve real-world problems.

EXPERIENCE

Data Annotator | Adzzat *Jul 2026 – Present*

- Annotated over 5,000 minutes of US-based robotics video data on the Encord platform in support of robot learning and computer vision model development.
- Wrote high-level task captions and segment-level captions describing robotic manipulation actions, ensuring accuracy and consistency with project style and labeling guidelines.
- Reviewed edge cases and ambiguous task segments to maintain annotation quality and dataset reliability for downstream model training.

PROJECTS

Sea Route AI — Autonomous Ship Navigation System | Personal Project *2026*

- Developed a predictive telemetry and guidance simulation for autonomous ship dynamics incorporating complex collision regulations (COLREGs).
- Implemented real-time dynamic path-planning algorithms that computed the exact shortest route based on live weather conditions, evaluating safe maneuvering envelopes in high-traffic maritime corridors.
- Designed modular visualization layouts utilizing Matplotlib to map out telemetry trajectories, improving simulation analysis efficiency.
- Submitted as a research paper to IJERT (Paper ID: IJERTV15IS042311).

Classification of Plant Disease using AIML | Personal Project *2025*

- Developed an end-to-end computer vision model trained to detect and classify various agricultural crop and plant diseases from leaf imagery.
- Utilized OpenCV for advanced image preprocessing, including noise reduction, color space conversion, and thresholding to isolate infected areas.
- Built and optimized deep learning convolutional neural network (CNN) structures in TensorFlow, achieving 85% classification accuracy under varying lighting conditions.

Rental Tracker | Personal Project *2026*

- Developed a digital rental management system to track tenant details, rent payments, and due dates.
- Leveraged AI agents, including Claude, to accelerate development, assist with code generation, debugging, and optimize application features.

CERTIFICATIONS

- Career Essentials in Generative AI — Microsoft & LinkedIn
- Gen AI — Indiana University | Issued May 2026
- No-Code Machine Learning and Generative AI — AWS Training Online | Issued Feb 2025
- Neural Networks and Deep Learning — Great Learning | Issued Jul 2024
- Learning Microsoft 365 Copilot | Issued Mar 2024

PUBLICATIONS

- "Sea Route AI: Intelligent Maritime Route Optimization Framework" — submitted to IJERT (International Journal of Engineering Research & Technology), ISSN: 2278-0181, Paper ID: IJERTV15IS042311.

EDUCATION

BE, Artificial Intelligence and Data Science | Rizvi College of Engineering *2023 – 2027*

HSC (75%) | SSC (79%) | Shri Dawle Junior College / Holy Cross Convent *2020 – 2023*

TECHNICAL SKILLS

Languages & Tools: Python, SQL, MATLAB, Git/GitHub, Firebase

ML/AI: Pandas, NumPy, TensorFlow, Keras, OpenCV, Machine Learning, Deep Learning, Prompt Engineering

Other: Flask, Web Development, Chatbot Development, Data Analysis & Visualization
